Patent No. GOVERNATION:
GENERAL INFORMATION:
APPLICANT: AMYLIN Pharmaceuticals, Inc.
APPLICANT: AMYLIN Pharmaceuticals, Inc.
APPLICANT: Young, Andrew et al.
ITITLE OF INVENTION: USE OF EXENDINS AND AGONISTS THEREOF FOR THE TREATMENT ITITLE OF INVENTION: OF GESTATIONAL DIABETES MELLITUS
FILLE REFERENCE: 030639.0032.UTL2 (243/131US)
CURRENT APPLICATION NUMBER: US/09/323,867A
CURRENT FILING DATE: 1999-06-01
NUMBER OF SEQ ID NOS: 189
NUMBER OF SEQ ID NOS: 189
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      US-09-323-867A-69

Patent No. 6506724

GENERAL INFORMATION:

APPLICANT: Amylin Pharmaceuticals, Inc.
APPLICANT: Young, Andrew et al.

APPLICANT: Young, Andrew et al.

TITLE OF INVENTION: USE OF EXENDINS AND AGONISTS THEREOF FOR THE TREATMENT
TITLE OF INVENTION: OF GESTATIONAL DIABETES MELLITUS
FILE REFERENCE: 030639.0032.UTL2 (243/131US)
CURRENT FLING DATE: 1999-06-01

NUMBER OF SEQ ID NOS: 189

SOFTWARE: Patentin Ver. 2.1 and Microsoft Word

Sequence 184, Application US/09323867A

Patent No. 6506724

GENERAL INFORMATION:
APPLICANT: Applicantion Pharmaceuticals, Inc.
APPLICANT: Applicantion: USE OF EXENDING AND AGONISTS THEREOF FOR THE TREATMENT TITLE OF INVENTION: OF GESTATIONAL DIABETES MELLITUS
FILE REFERENCE: 030639.0032.UTL2 (243/131US)
FULE REFERENCE: 030639.0032.UTL2 (243/131US)
CURRENT APPLICATION NUMBER: US/09/323,867A
CURRENT FILING DATE: 1999.06-01
NUMBER OF SEQ ID NOS: 189
SOFTWARE: Patentin Ver. 2.1 and Microsoft Word
SEQ ID NO 184
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 12

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

HARPIN ELICITS HR IN NON-HOSTS AND IS ALSO REQUIRED FOR PATHOGENICITY IN HOST.
-!- SUBCELLULAR LOCATION: SECRETED; VIA THE HRP SECRETION PATHWAY.
-!- MISCELLANEOUS: DIFFERENT PLANTS EXHIBIT DIFFERENT LEVELS OF SENSITIVITY TO HARPIN-PSS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      He S.Y., Huang H.-C., Collmer A.; "Pseudomonas syringae pv. syringae harpinPss: a protein that is secreted via the Hrp pathway and elicits the hypersensitive response

                                                                                                                                                                                                                                                                                                           SEQUENCE FROM N.A.
                                                FUNCTION: ACTS AS A DIFFERENTIATION FACTOR DURING NEUROGENESIS.
TRANSCRIPTIONAL ACTIVATOR. BINDS TO THE INSULIN GENE E-BOX.
SUBUNIT: EFFICIENT DNA BINDING REQUIRES DIMERIZATION WITH ANOTHER BHLH PROTEIN, HETERODIMER WITH E47.
SUBCELLULAR LOCATION: Nuclear (Potential).
TISSUE SPECIFICITY: MOST ABUNDANT IN PANCREATIC ALPHA- AND BETA-CELLS, LESS IN BRAIN AND INTESTINE.
SIMILARITY: BELONGS TO THE BASIC HELIX-LOOP-HELIX (BHLH) FAMILY OF TRANSCRIPTION FACTORS. "ATONAL" SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       P29095; 1AIS.

DNA ligase (BC 6.5.1.1) (Polydeoxyribonucleotide synthase [ATP]).
African swine fever virus (isolate Malawi Lil 20/1) (ASFV).
Viruses; dsDNA viruses, no RNA stage; Asfarviridae; Asfivirus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Neurogenesis; Developmental protein; Differentiation.

Virol. 75:1655-1684(1994).

FUNCTION: THIS PROTEIN SEALS DURING DNA REPLICATION, DNA FUNCTION AND DNA REPAIR NICKS IN DOUBLE-STRANDED DNA. RECOMBINATION AND DNA REPAIR REPLICATION AND RECOMBINATION. IT IS NOT ESSENTIAL FOR VIRAL REPLICATION AND RECOMBINATION. CATALYTIC ACTIVITY: ATP + (deoxyribonucleotide) (M) = AMP + diphosphate + (deoxyribonucleotide) (M) = AMP + diphosphate + (deoxyribonucleotide) (N+M).

- SIMILARITY: BELONGS TO THE ATP-DEPENDENT DNA LIGASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  BIND

"Genetic and biochemical characterization of phosphofructokinase from
the opportunistic pathogenic yeast Candida albicans.";
Eur. J. Biochem. 260:217-226(1999).
-!- CATALYTIC ACTIVITY: ATP + D-fructose 6-phosphate = ADP + D-
fructose 1,6-bisphosphate.
-!- ENZYME REGULATION: Allosterically inhibited by ATP and activated
by AMP and fructose 2,6-bisphosphate.
-!- PATHWAY: Key control step of glycolysis.
-!- SUBUNIT: Heterooctamer of 4 alpha and 4 beta chains (By
